

# decofoil™

A fun and creative way to add a foil finish to any project!

decofoil™ Hot Melt Adhesive is a heat-activated adhesive that is perfect for wearables, cards, and so much more! Can be applied with an iron or most laminators. Simply cut out your desired shape, apply heat and foil!

1. Create hot melt design using a punch, die cut, or an electronic cutting machine. Place design onto project with adhesive (rough side) face down.

2. Turn on laminator, select 5mil setting, and allow 5 minutes to warm up. When ready, insert folded parchment with project into laminator using the crease as the lead edge.

3. Remove project from parchment paper and allow to cool. Peel off liner to expose adhesive design.

4. Cut a piece of foil slightly larger than the design. Place foil, color side facing up, on top of the adhesive design. Place project with foil covered adhesive design inside. Insert into laminator using the crease as the lead edge.

5. Remove project from parchment paper and allow to cool. Peel foil transfer sheet away from adhesive design.
